Thesis project of two of my students

- "Dear professor can you give us the hardest task you have in mind for our thesis project?"
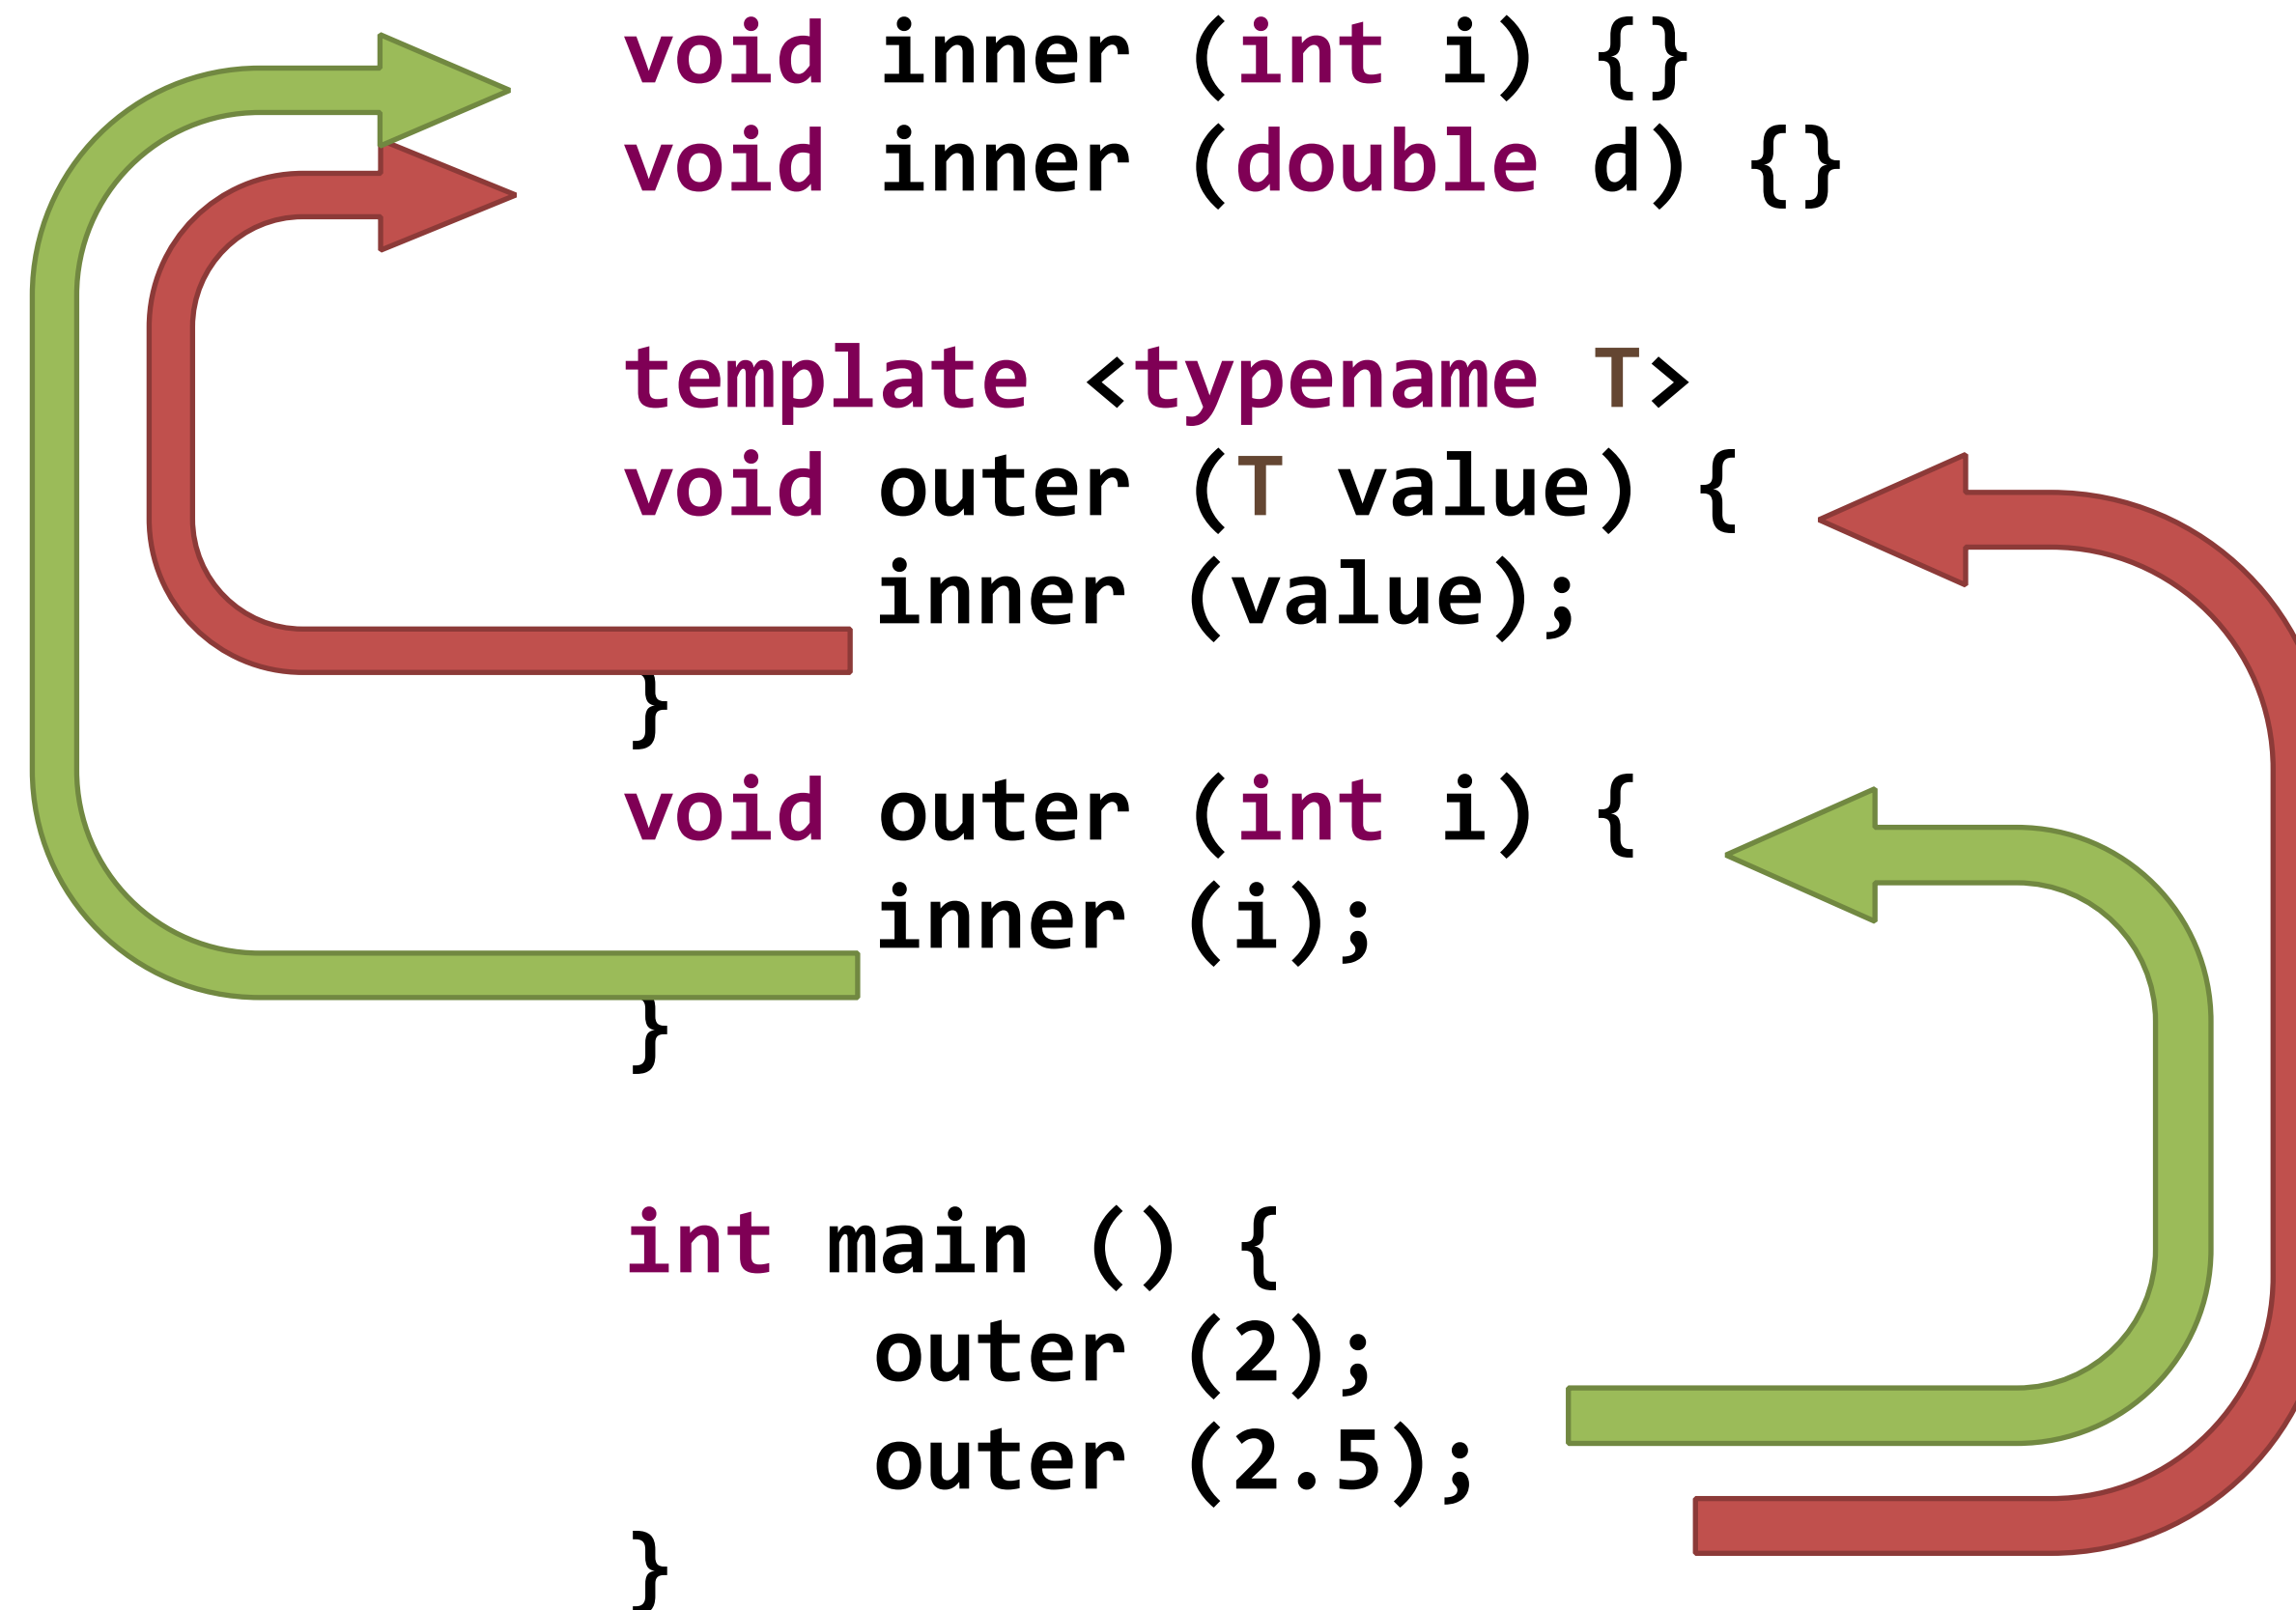

Jonas
Biedermann

Marco
Syfrig

Problems with Templates

```
std::vector<bool> v{};
```

- compiler instantiates a template in the background

  - programmer cannot see the generated code

  - hard to understand

- nested template instantiations

  - compilers may behave unexpected

  - chosen overloads or specializations are not always obvious

Overload resolution

```cpp
void inner (int i) {}
void inner (double d) {}

template <typename T>
void outer (T value) {
    inner (value);
}
void outer (int i) {
    inner (i);
}

int main () {
    outer (2);
    outer (2.5);
}
```

Not completely supported by CDT

```
void inner (int i) {}
void inner (double d) {}

template <typename T>
void outer (T value) {
    inner (value);
}
void outer (int i) {
    inner (i);
}

int main () {
    outer (2);
    outer (2.5);
}
```

Open Declaration — □ ✕

Select one element from the list

◉ inner(double) - /Over/9000.cpp
◉ inner(int) - /Over/9000.cpp

(?)   OK   Cancel

Olve Maudal's pub quiz 2014 (Q3)

```cpp
#include <iostream>
#include <utility>
void y(int&) { std::cout << '1'; }
void y(int&&) { std::cout << '2'; }

template <typename T>
void f(T && x) { y(x); }
template <typename T>
void g(T && x) { y(std::move(x)); }
template <typename T>
void h(T && x) { y(std::forward<T>(x)); }

int main() {
    int i{42}; // changed original  i=42 to i{42}
    y(i), y(42);
    f(i), f(42);
    g(i), g(42);
    h(i), h(42);
}
```
- Overload resolution can be tricky for programmers to grasp!

- Guess the output without running it!

Let's Demo

and see if Templator helps

Wrap up

- Templator visualizes template instantiation and call chains

- Templator shows code, only the compiler would generate internally, but it is not perfect yet, due to parser deficiencies

  - we are working on SFINAE, C++14 constexpr, and Concepts

- is available as part of free Cevelop-neon 1.5 IDE Preview

  - financial and other support highly appreciated for Cevelop

   - (unfortunately no micro-payments acceptable yet)
